

# AUCKLAND COBRA

## HISTORY

Auckland Cobra was founded by Rex Garland 20 years ago. It all started because of his love for the original AC Cobra. Rex believed that replicas on the market at the time did not accurately portray the original AC Cobra. He therefore decided, with the help of friends, to build a better version himself.

## FEATURES

The Auckland Cobra features the latest XENON LED lighting, Tonneau cover, soft and hard tops, power steering, adjustable seats, and safety over-ride on all features. The Auckland Cobra is simply the old roadster enhanced by today's technology.

## CONSTRUCTION

The Auckland Cobra uses materials such as Kevlar, Carbon fibre, full grained New Zealand leathers, and stainless steel fittings. It is built to a professional standard in Auckland, New Zealand by the Auckland Cobra team.

## SPECIFICATIONS

The Auckland Cobra has all round disc brakes, Goodyear F1 Eagle radial tyres on 17 inch one-piece wheels, provision for ABS and traction control, manual/automatic 5-speed gearbox, 289 or 302 Ford V8 engine, and an overall weight of 1000kg.
